

RainwaterHOG

the urban rainwater storage solution

RAINWATERHOG, the first truly modular, architect-designed rainwater tank made in Australia and tested under drought conditions, allows the house-proud and the eco-conscious to harvest their rainwater without compromising space or aesthetics.

Multi-use, space-saving water tank

- **REDUCE MAINS WATER USAGE BY 50%**
Harvested rainwater can be used for drinking, toilet flushing, laundry water and irrigating your garden.
- **SIMPLE INSTALLATION**, modular design, no footings necessary. Can be installed horizontally or vertically, and are designed to fit under decks, houses, along walls and fences.
- **HOLDS 183 LITRES** per HOG with extendable capacity – add greywater capacity or mains connection later.
- **WEIGHS 18KG**, easy OH&S compliant one person lift.
- **ADDS THERMAL MASS** to buildings. Can be installed inside walls, floors and roofs.
- **ACCESSORIES** include wall kit, attachable battened cedar screen and leaf catcher.
- **REMOVABLE** for renters and renovators.
- **MADE WITH ENVIRONMENTALLY SOUND** food-grade polyethylene, which means HOG is fully recyclable at the end of its useful life.

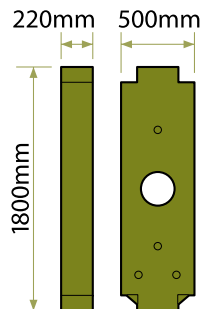

6 HOGs = 1098 litres

under a 300mm high
3m deck

12 HOGs = 2195 litres

without blocking
side passage

Cost efficient

With HOG the upfront cost is all the cost: if you compare grouping HOGs at each downpipe with the supply and installation costs of a large tank with all the reticulation that entails...HOG wins hands down. By placing banks of HOGs at each downpipe you will save substantially on reticulation costs - and do away with ugly pipework.

Available in a range of 42 colours!

IDEAL FOR:

- corporate colours
- sports clubs
- schools

Don't compromise on space, don't compromise on aesthetics....
